

# Beep, Bop, Trade.

A visual flight manual for today's RoboSats — from first robot to a full Pro Trade Desk.

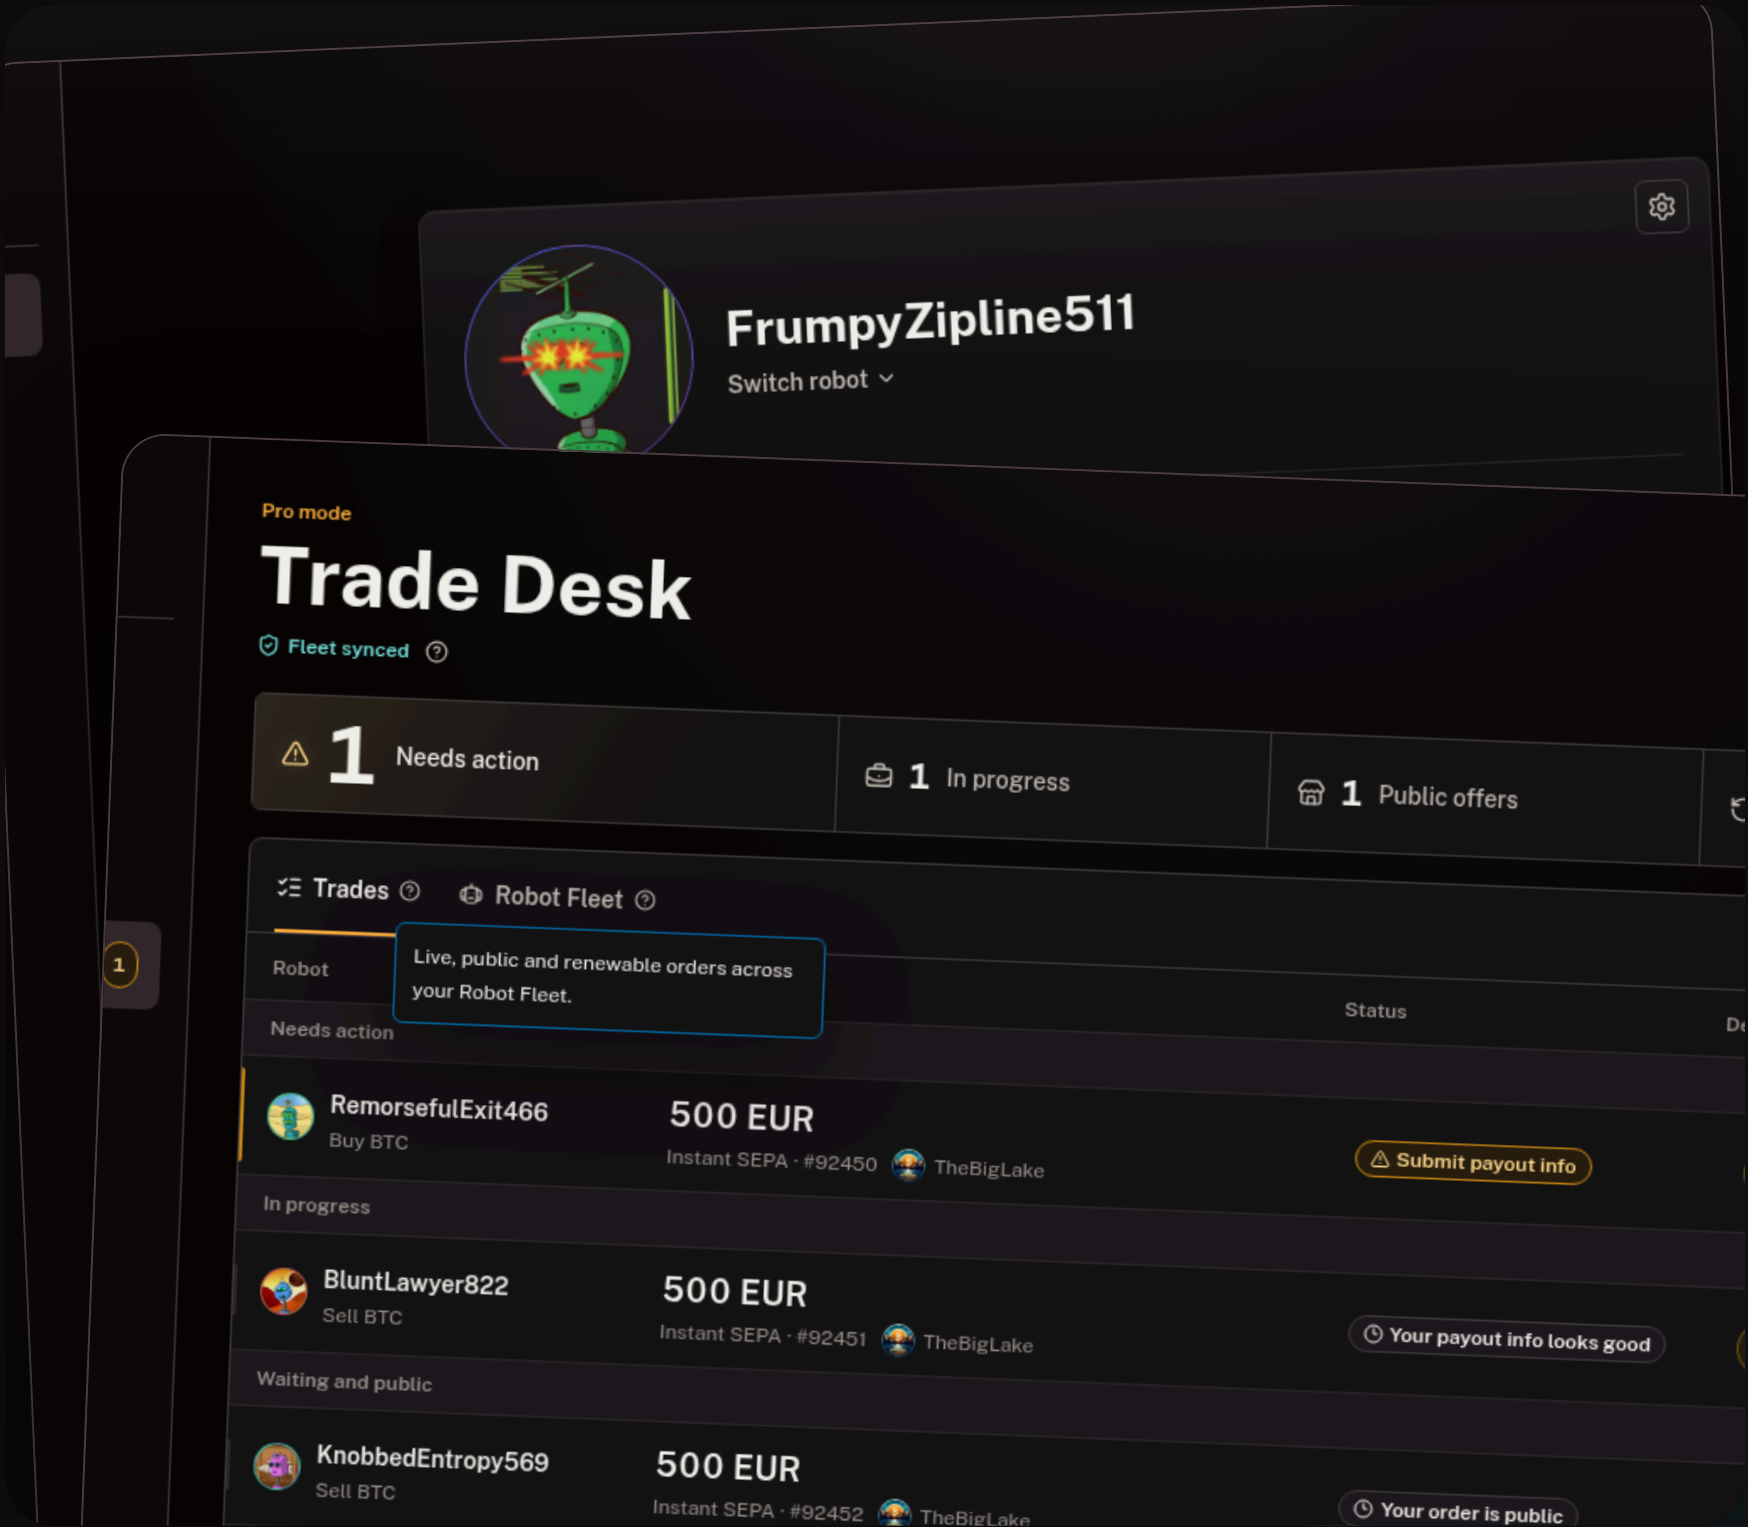

Real current screens. Exact in-app robot avatars. Sensitive values intentionally hidden.

**Beep**  
Standard guide

**Bop**  
Pro guide

# Pack the right tools

Open RoboSats through supported Tor access and have a working Lightning wallet ready.

Bonds, escrow, and payouts are timed. Test the wallet before a live trade starts.

- Tor connection
- Lightning wallet
- Enough uninterrupted time

**BEEP**  
Wallet ready. Panic unnecessary.

**BEEP**

Garage organized. Bolts accounted for.

# Choose the trade direction

Buy means pay fiat and receive BTC.  
Sell means lock BTC and receive fiat.

Every later amount and payment instruction follows this choice.

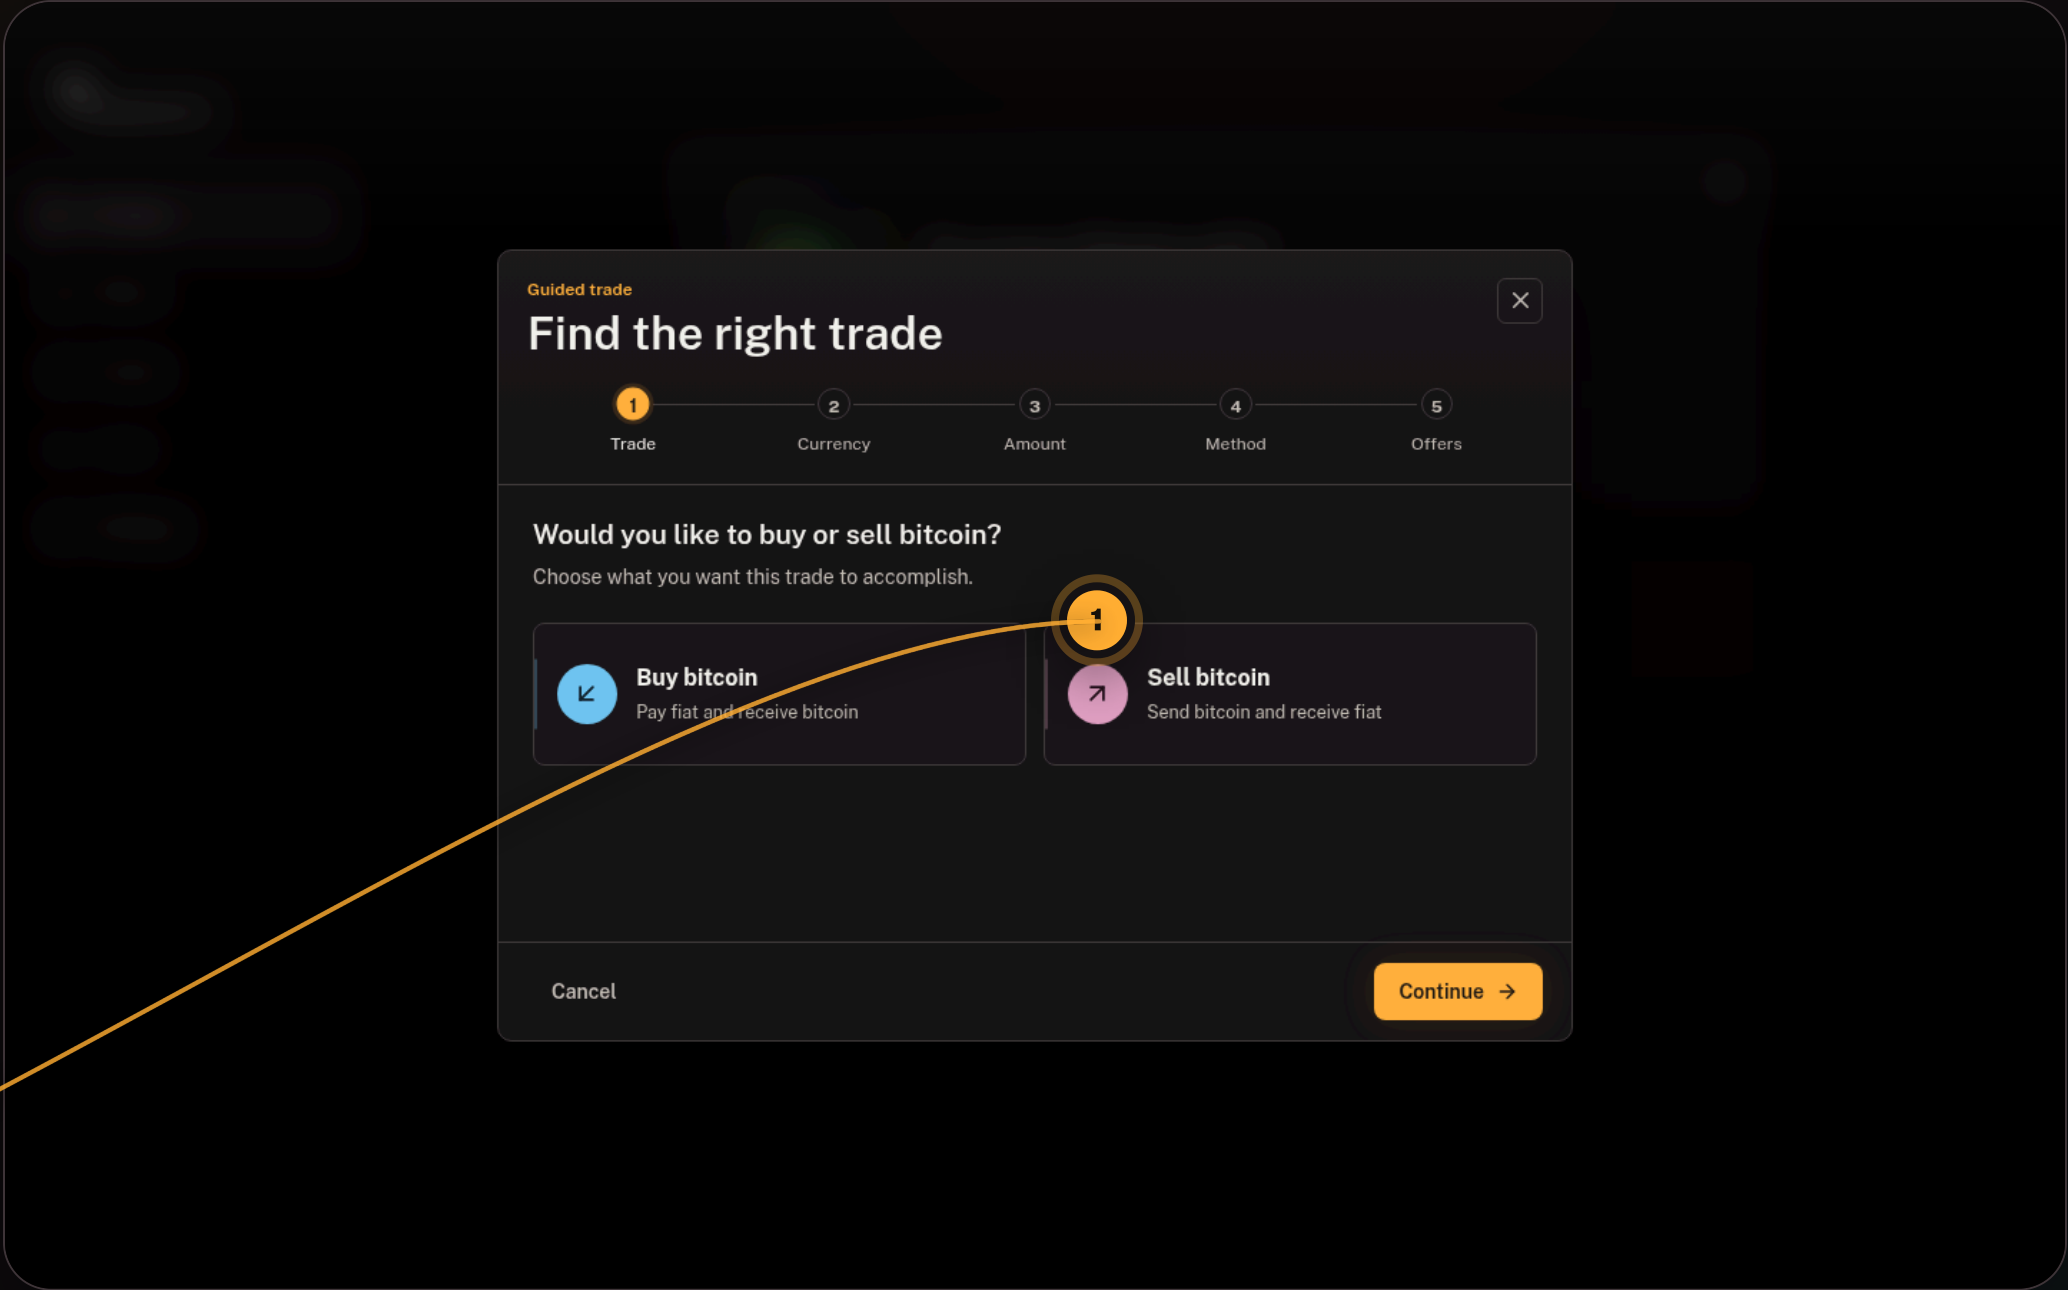

Buy: fiat → BTC

Sell: BTC → fiat

**BEEP**

Arrows first, buttons second.

# Pick the fiat currency

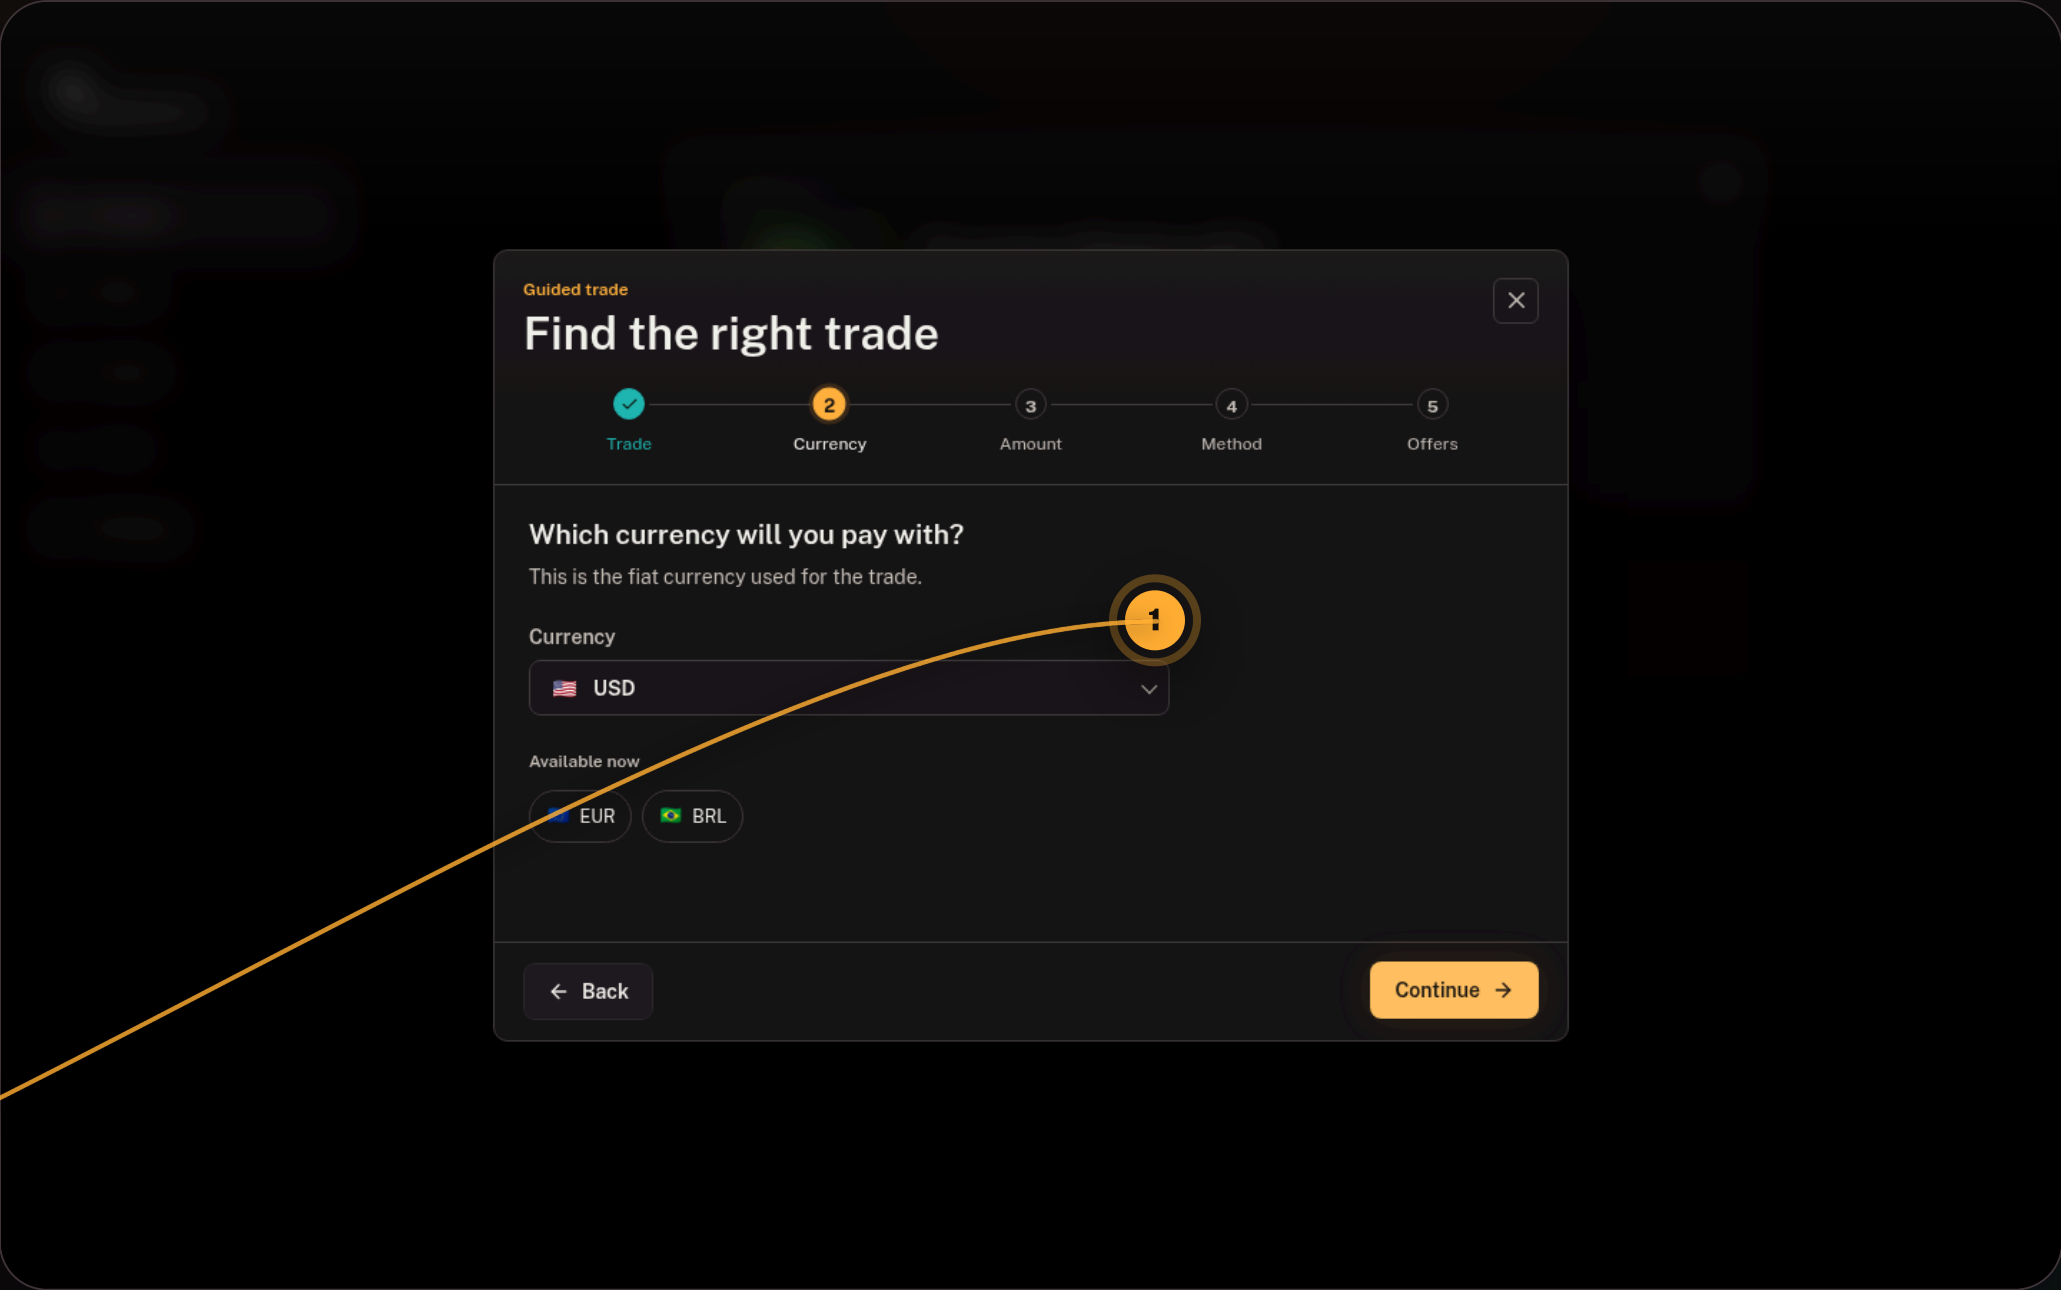

Select the currency you will actually send or receive.

Currency determines which offers and payment methods can match.

- Correct unit
- Available now
- Local payment rail

**BEEP**  
No interplanetary exchange rates.

# Set the exact amount

Enter the fiat amount you can complete within the trade window.

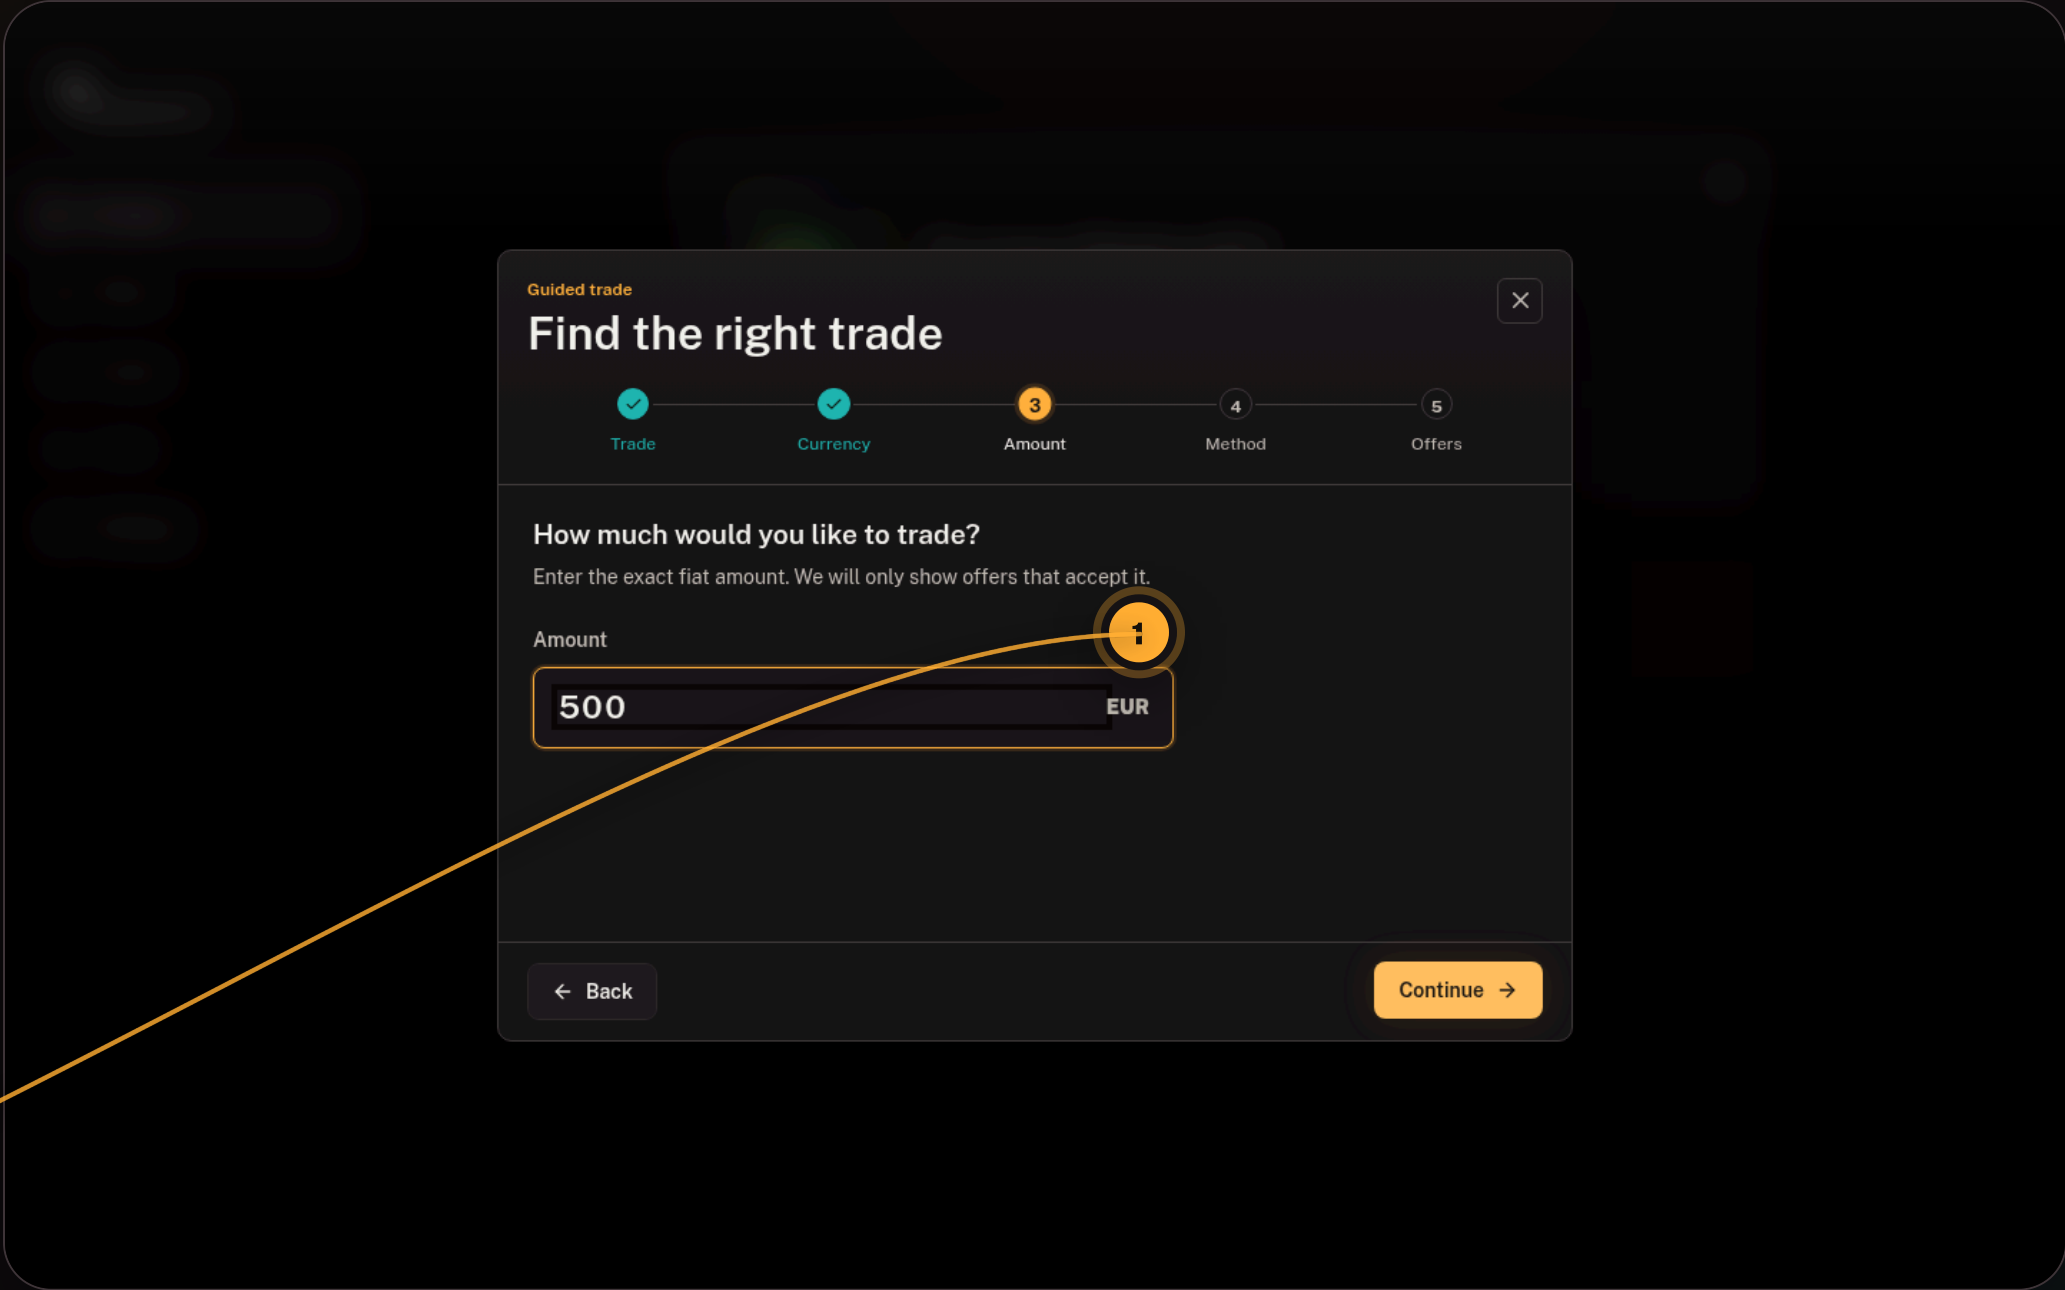

A realistic amount reduces failed payments and cancellation risk.

- Exact fiat amount
- Available balance
- Trade window

**BEEP**

Measure twice, trade once.

# Choose a payment method

Pick one you can use immediately from an account you control.

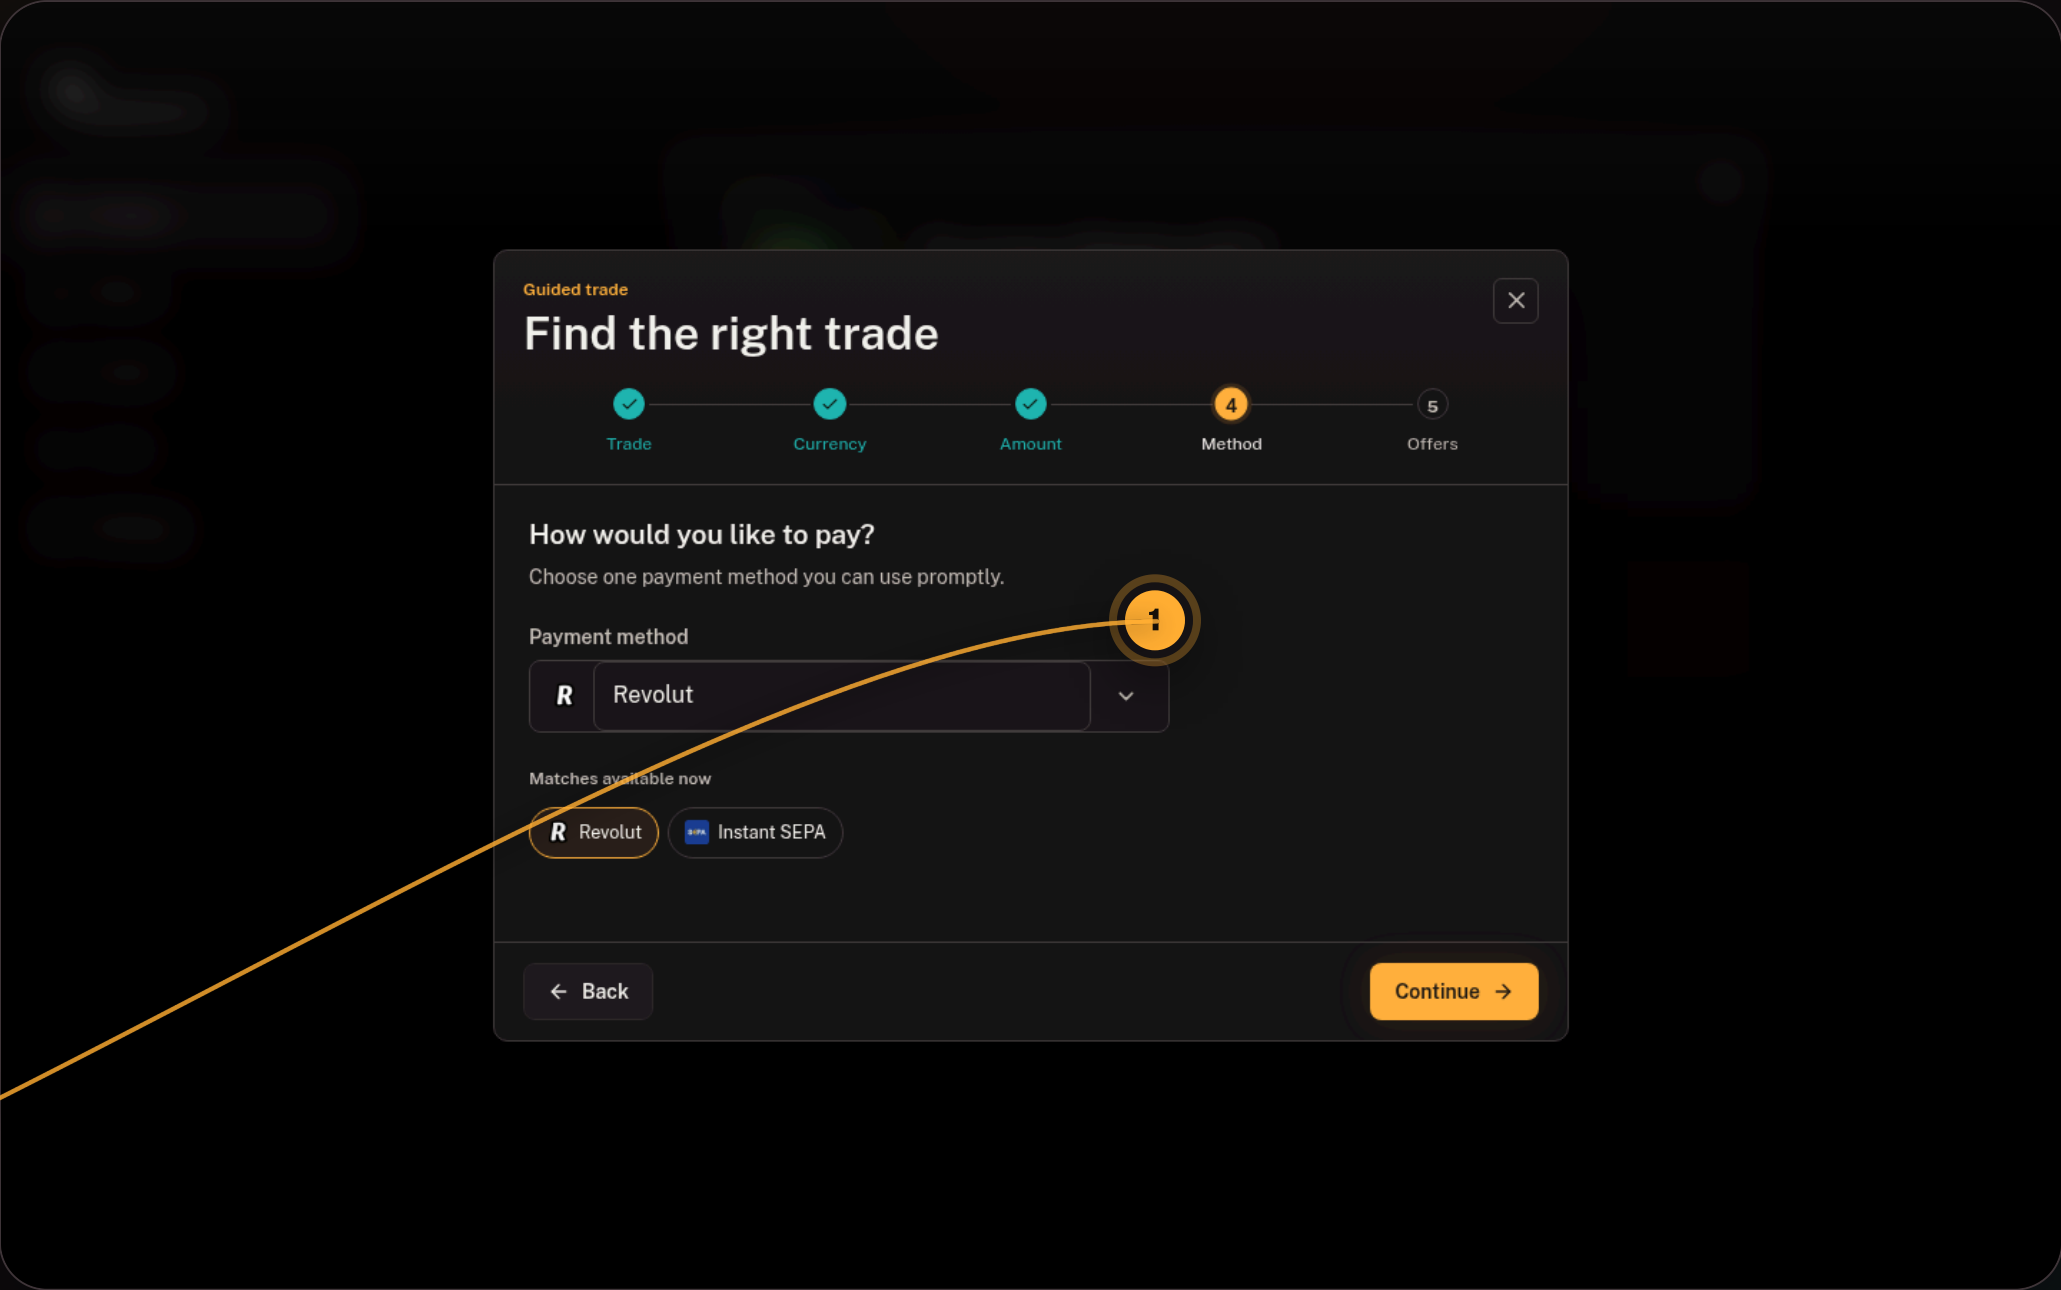

Necessary payment details belong in encrypted trade chat later.

- Available now
- Account access
- Prompt settlement

**BEEP**

Compatible rails detected.

# Compare the best matches

Review a matching offer, or create one when none fits.

Best match reflects the filters — it is not a safety guarantee.

- Amount
- Premium
- Method
- Expiry

**BEEP**  
Best match still deserves a look.

Optional feedback for your peer an

1

# Recover without leaking identity

Open Robot settings to restore a saved token; use a fresh identity when continuity is unnecessary.

Never expose a token, and resolve active orders before removing a local identity.

- Recover
- Fresh robot
- Remove carefully
- Token stays secret

**BEEP**

Privacy likes a fresh chassis.

# Know when Pro helps

Use Pro for repeated trading, concurrent identities, presets, and encrypted Fleet recovery.

It organizes the same trading protocol — it is not a different or inherently safer trade type.

- Up to 6 robots
- Concurrent work
- Presets
- Encrypted recovery

**BOP**  
More dashboards, same physics.

# Prefer a fresh identity

Choose an available robot; use New identity · Best privacy when practical.

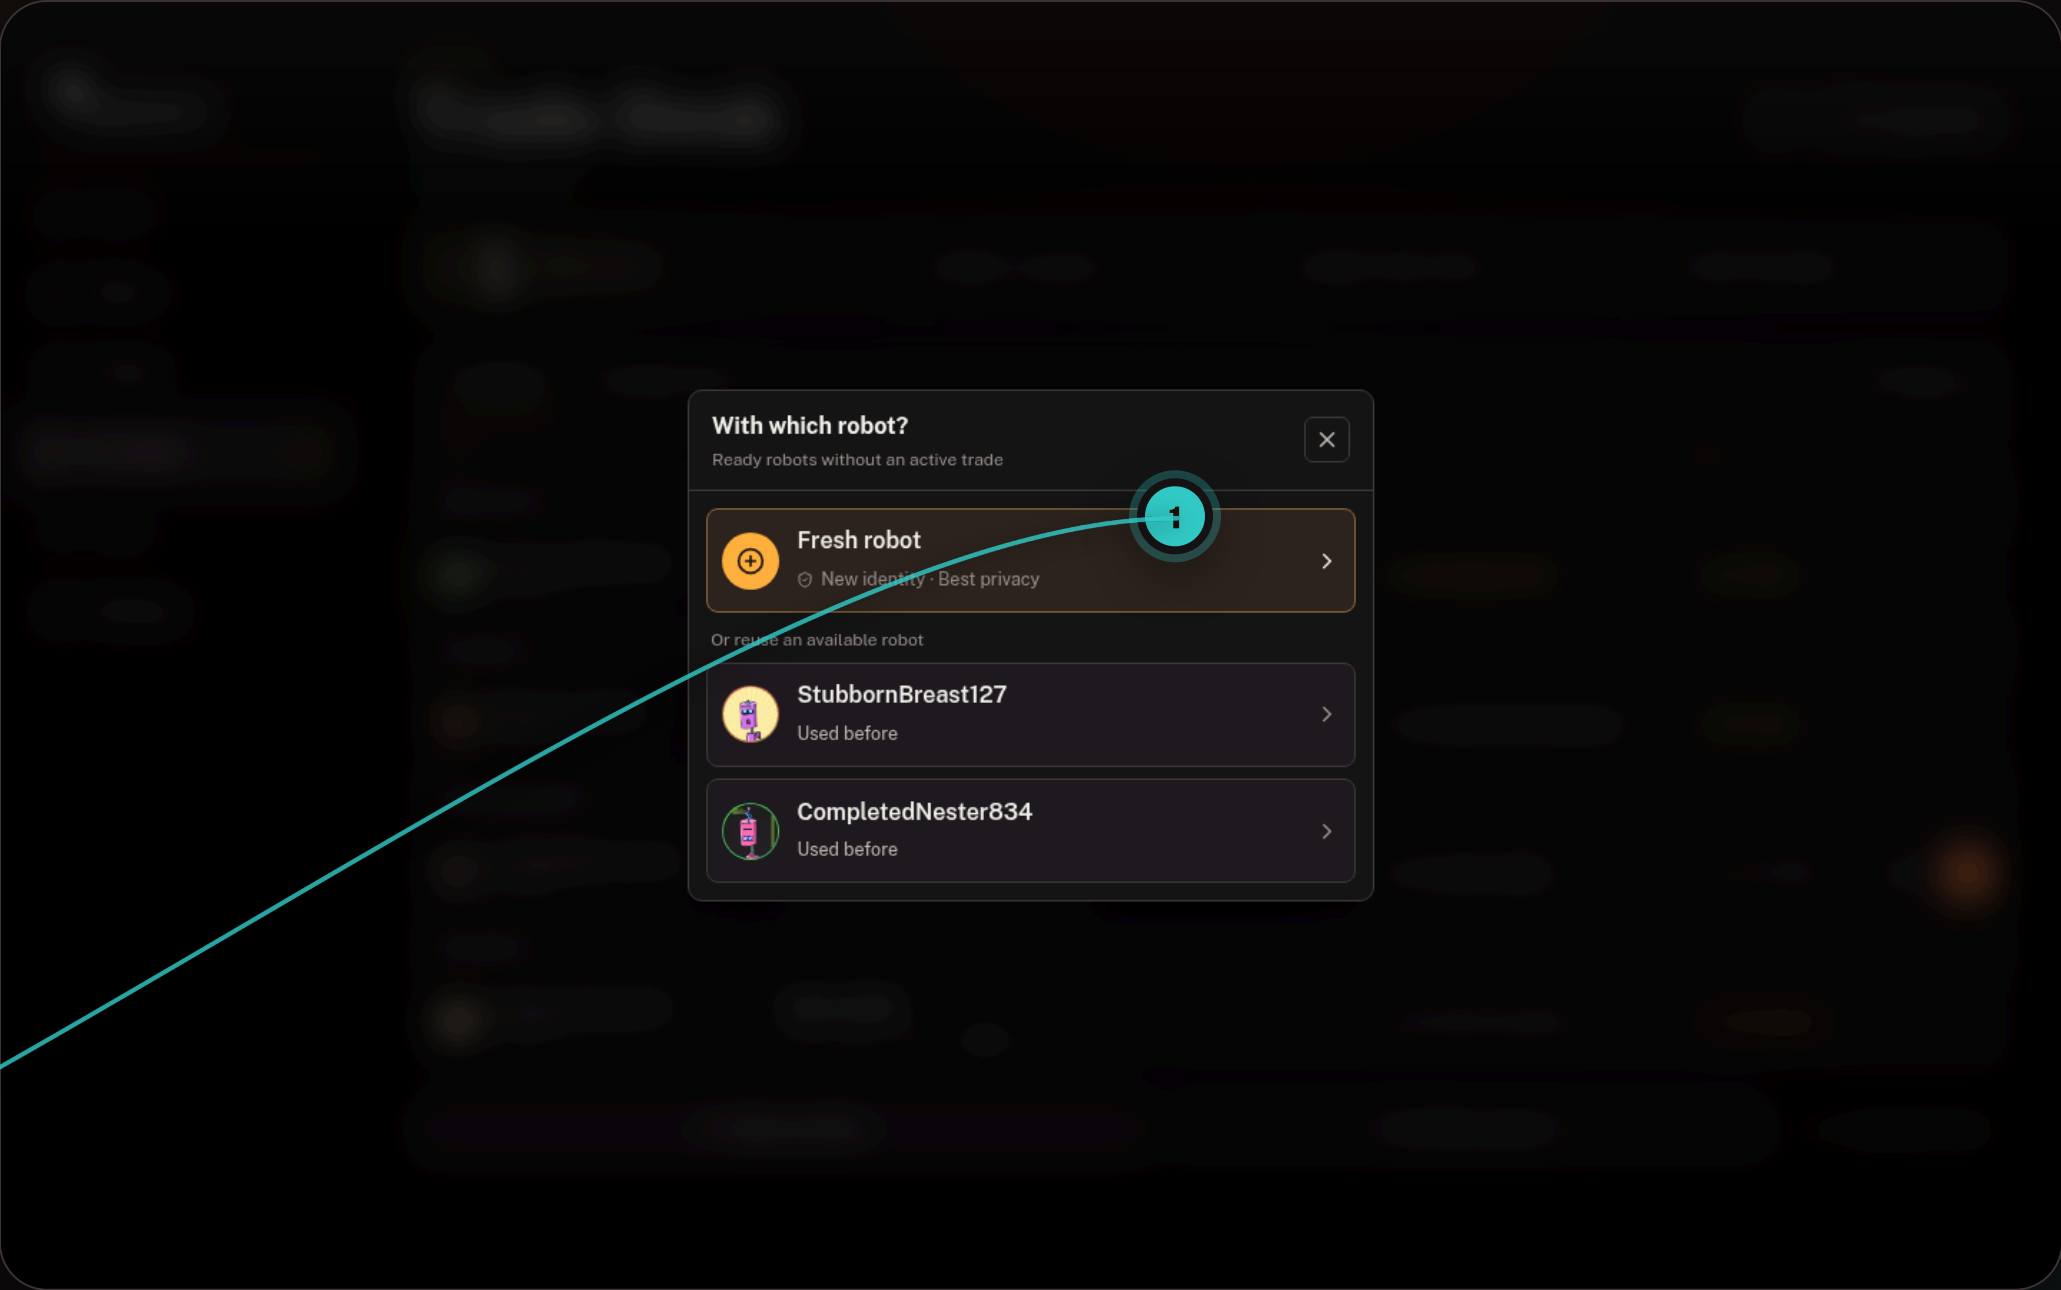

Reusing a robot can link activity across otherwise separate trades.

- Fresh robot
- Best privacy
- Used before warning

**BOP**

Fresh paint, smaller trail.

# Act from the Trades table

Use Pause, Cancel, or Resume only when offered; otherwise open the complete trade.

The coordinator sits beneath Order. Every private step remains the normal trade flow.

- Robot
- Order + coordinator
- Status + deadline
- Safe shortcuts

**BOP**

Shortcut when safe, detail when needed.

Back up FleetOffer presetsAbandon Fleet

Set up your Robot Fleet

One Trade Desk

A Fleet lets you manage several RoboSats robots and their trades from one Trade Desk.

Each robot remains a standard RoboSats identity recoverable in any RoboSats app. Your Fleet key restores the complete collection on another device.

Set up a new FleetRestore Fleet

Keep standard Garage

Restore

Recheck live state

# Leave without surprises

Switch modes freely; abandon the Fleet only after backing up and resolving active work.

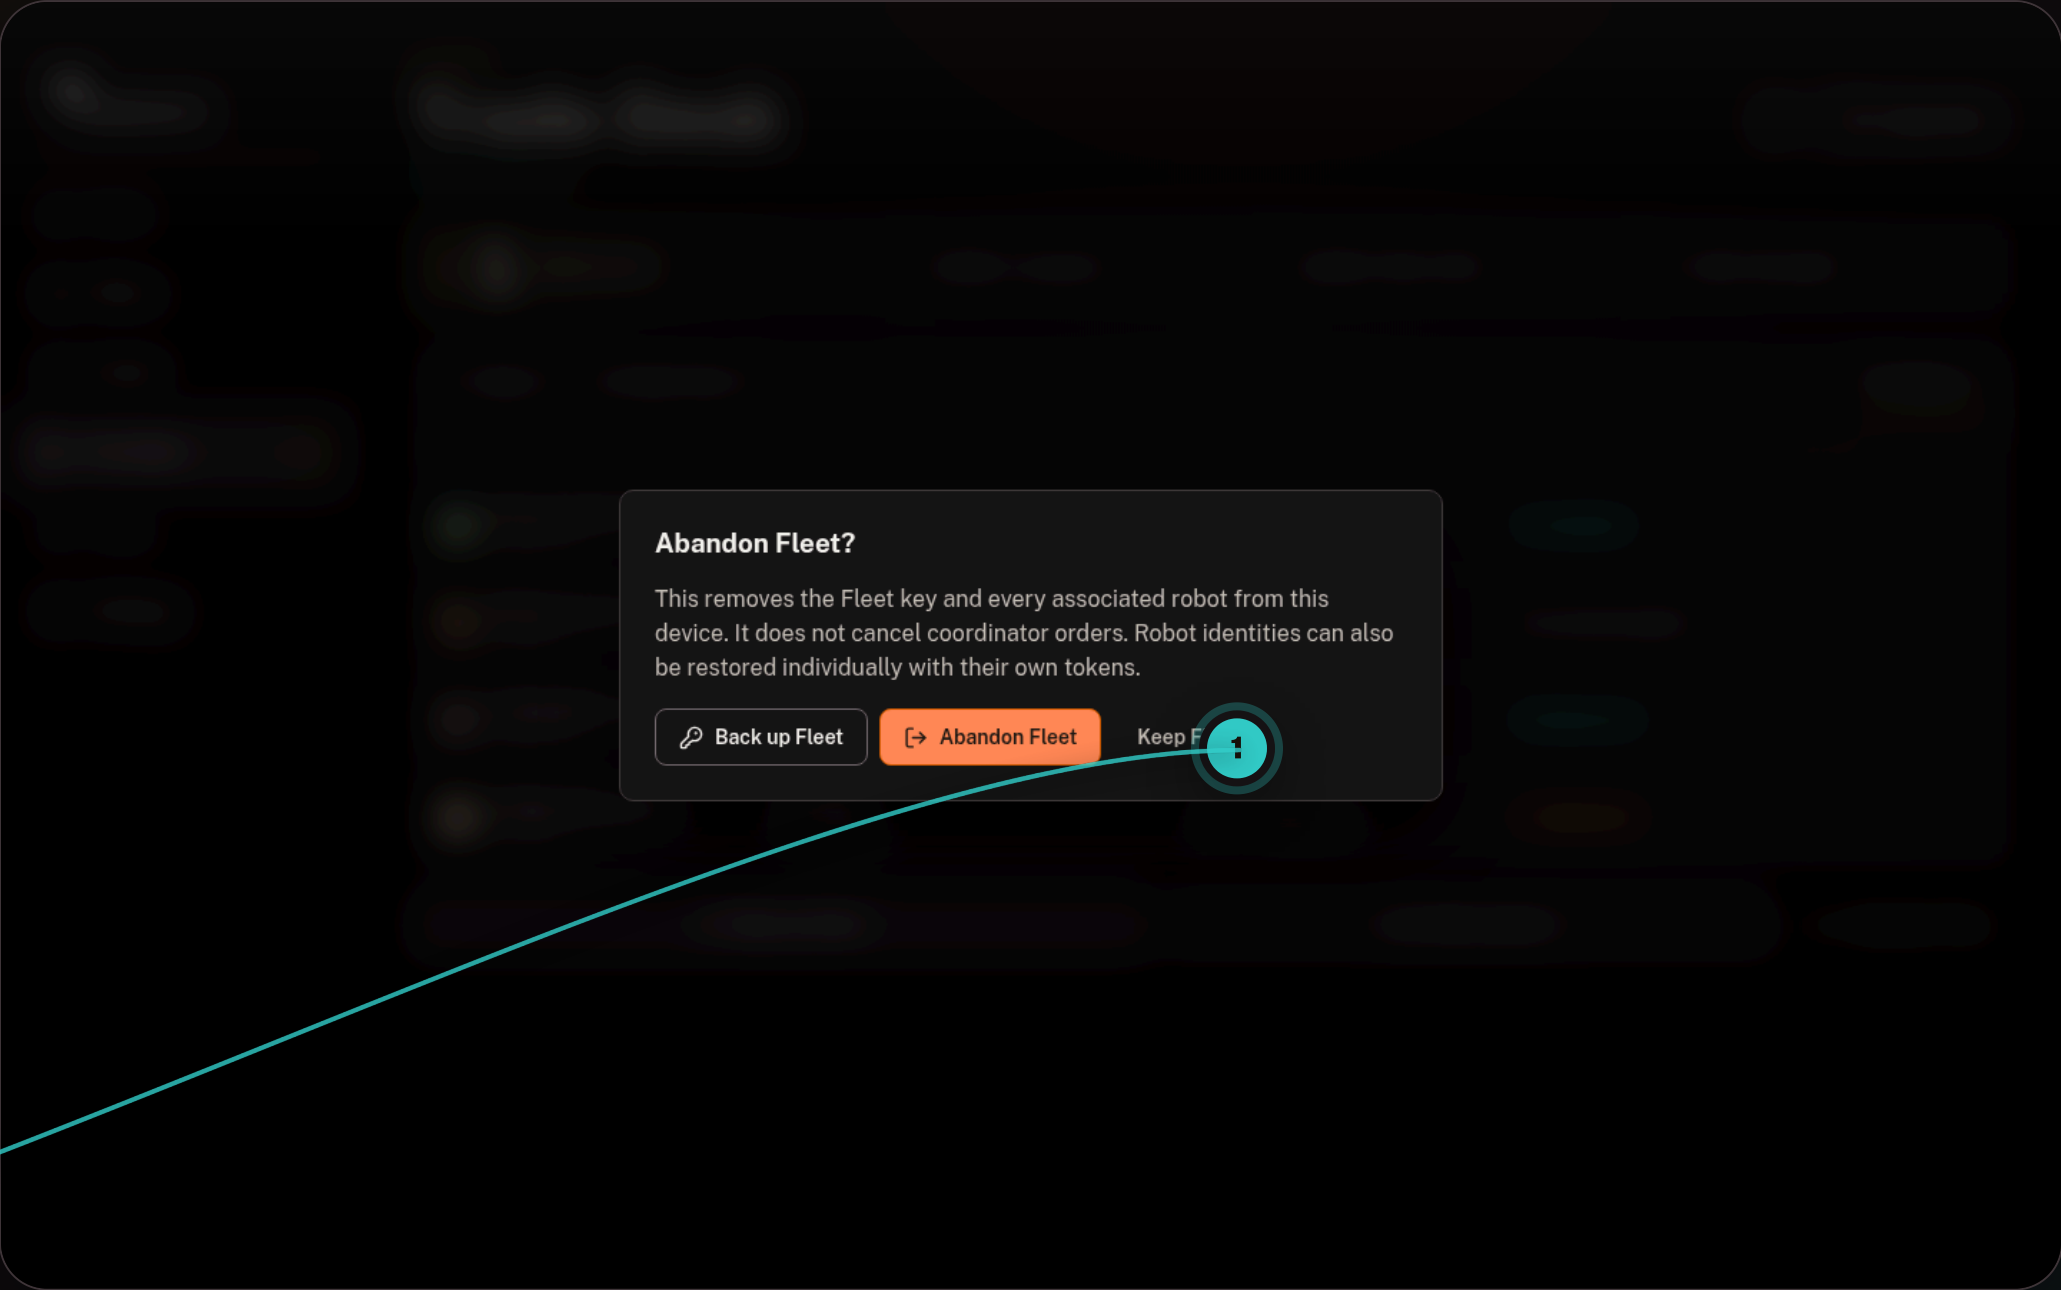

Abandon is destructive locally and does not cancel orders already held by coordinators.

- Switching is safe
- Backup first
- Remote orders persist
- Abandon is destructive

**BOP**

Checklist before the eject lever.

# Clarity first. Privacy always.

**Back up the right secret, read every state, act once, and verify money in the real wallet or account.**

This guide follows the current repository UI. The 2022 video inspired its teaching rhythm, not its obsolete screens or rules.

The image is a screenshot of a trade confirmation interface in a dark theme. At the top, a teal circle with a white checkmark indicates the trade is completed. Below this, the text 'You bought bitcoin' is followed by the large amount '836,120 sats' and the fiat value 'for 3,000 BRL'. A horizontal line separates this from the 'Trade fee' section, which shows '1,254 sats (0.15%)'. Another horizontal line follows. The trader's profile is shown as 'InterracialUnit93' with a small avatar icon and the identifier '#95955 · TheBigLake'. Below the profile, a teal circle with the number '1' and a line pointing to the 'Full breakdown' section is visible. The 'Full breakdown' section contains a 'Download overview' button with a download icon and a 'Start another trade' button with a lightning bolt icon. Below these buttons, a line of text states: 'This summary is kept in your encrypted Fleet history stored over nostr.' At the bottom, there is a 'Rate your trade' section with a star icon and a dropdown arrow, and the text 'Optional feedback for your peer and host'.

## BOP

Pre-flight complete. Trade thoughtfully.
